This book will be of interest to a broad readership, regardless of whether they have a background in sociolinguistics, functional linguistics or genre theories. It presents an accessible “meta-language” (i.e. a language for talking about language) that is workable and usable for teachers and researchers from both language and content backgrounds, thus facilitating collaboration across content and language subject panels. Chapters 1 to 3 lay the theoretical foundation of this common meta-language by critically reviewing, systematically presenting and integrating key theoretical resources for teachers and researchers in this field. In turn, Chapters 4 to 7 focus on issues in pedagogy and assessment, and on school-based approaches to LAC and CLIL, drawing on both research studies and the experiences of front-line teachers and school administrators. Chapter 8 provides a critical and reflexive angle on the field by asking difficult questions regarding how LAC and CLIL are often situated in contexts characterized by inequality of access to the linguistic and cultural capitals, where the local languages of the students are usually neglected or viewed unfavourably in relation to the L2 in mainstream society, and where teachers are usually positioned as recipients of knowledge rather than makers of knowledge. In closing, Chapter 9 reviews the state of the art in the field and proposes directions for future inquiry

In an era of climate change, the need to manage our water resources effectively for future generations has become an increasingly significant challenge. Indigenous management practices have been successfully used to manage inland water systems around the world for thousands of years, and Indigenous people have been calling for a greater role in the management of water resources. As First Peoples and as holders of important knowledge of sustainable water management practices, they regard themselves as custodians and rights holders, deserving of a meaningful role in decision-making. This book argues that a key (albeit not the only) means of ensuring appropriate participation in decision-making about water management is for such participation to be legislatively mandated. To this end, the book draws on case studies in Australia and New Zealand in order to elaborate the legislative tools necessary to ensure Indigenous participation, consultation and representation in the water management landscape.

Although she’s an orphan in indentured servitude, sixteen-year-old Jennifer Strange is pretty good at her job of managing the unpredictable crew at Kazam Mystical Arts Management. She already solved the Dragon Problem, avoided mass destruction by Quarkbeast, and helped save magic in the Ununited Kingdoms. Yet even Jennifer may be defeated when the long-absent Mighty Shandar makes an astonishing appearance and commands her to find the Eye of Zoltar—proclaiming that if she fails, he will eliminate the only two dragons left on earth. How can a teenage non-magician outdo the greatest sorcerer the world has ever known? But failure is unacceptable, so Jennifer must set off for the mysterious Cadr Idris in the deadly Cambrian Empire—a destination with a fatality index of fifty percent. With the odds against them, will Jennifer and her traveling companions ever return to the Kingdom of Snodd?

Readable and highly illustrated, Robbins and Cotran Pathologic Basis of Disease, 10th Edition presents an in-depth, state-of-the-art overview of human diseases and their cellular and molecular basis. This best-selling text delivers the latest, most essential pathology knowledge in a readable, interesting manner, ensuring optimal understanding of the latest basic science and clinical content. More than 1,000 high-quality photographs and full-color illustrations highlight new information in molecular biology, disease classifications, new drugs and drug therapies, and much more. This superb learning package also includes an enhanced eBook with a full complement of ancillary content on Student Consult. Provides uniquely authoritative and readable coverage, ideal for USMLE or specialty board preparation, as well as for coursework. Covers the hot topics you need to know about, including novel therapies for hepatitis C, classification of lymphomas, unfolded protein response, non-apoptotic pathways of cell death, coronavirus infections, liquid biopsy for cancer detection, regulation of iron absorption, clonal hemopoiesis and atherosclerosis, thrombotic microangiopathies, hepatitis-induced thrombocytopenias, inflammatory myopathies, genetic tools for treatment of cystic fibrosis, and many more. Uses an outstanding full-color, user-friendly design to simplify your study and quickly direct you to the information you need to know, with learning features such as boldface overviews at the beginning of each section, key concepts boxes, suggested readings, schematic diagrams that illustrate complex concepts, and new gross and microscopic figures for clarity of morphology. Brings you up to date with the latest information in molecular and genetic testing, mechanisms of disease, personalized medicine and its impact on treatment of human diseases, the role of microbiome and metabolome in non-communicable diseases, and much more. Provides access to a wealth of interactive ancillaries online: pathology case studies, videos, self-assessment questions, Targeted Therapy boxes that discuss drug therapy for specific diseases, interactive cases, and more. Evolve Instructor site with an image and test bank is available to instructors through their Elsevier sales rep or via request at https://evolve.elsevier.com.

This research-based book takes an organization-wide perspective to describe the governance and governmentality for projects in organizations. Governance of projects defines and directs the ways managers of projects, programs, and project portfolios carry out their work. Governmentality is the way the managers of these managers present themselves to those they lead. Governance and Governmentality for Projects starts with introducing existing theories, models and paradigms for governance and governmentality. It then develops a chronological framework of the ways governance and governmentality for projects is enabled in organizations, how it subsequently unfolds in organizations of different types and sectors, and the consequences of different governance approaches for project results, trust, control, and ethical issues in projects. Special emphasis is given to the link between corporate governance and the governance of project, programs and project portfolios. Three real-life case studies exemplify the research findings described in the book. Through its structure this book describes the development of governance and governmentality in the realm of projects from its organizational origins, via observable practices, to expected consequences of different implementations. Aimed at academics, post-graduate students in business and management, reflective practitioners, standards or policy developers, those in governance roles and others in need of a detailed knowledge of the spectrum of project related governance in organizations, this book will help develop a comprehensive understanding of the theoretical and practical underpinnings of the subject, their interaction, and implications for implementation. This allows for understanding and developing of both generic and idiosyncratic governance structures, such as those needed in project-based organizations.

• in-depth explanation of key concepts • critical for exam preparations • holistic question answering techniques • exact definitions • complete edition and concise edition eBooks available

Dotted Grid Journal 180 pages (white paper) 7” x 10” book size Great price!

The ability to analyze and interpret enormous amounts of data has become a prerequisite for success in allied healthcare and the health sciences. Now in its 11th edition, Biostatistics: A Foundation for Analysis in the Health Sciences continues to offer in-depth guidance toward biostatistical concepts, techniques, and practical applications in the modern healthcare setting. Comprehensive in scope yet detailed in coverage, this text helps students understand—and appropriately use—probability distributions, sampling distributions, estimation, hypothesis testing, variance analysis, regression, correlation analysis, and other statistical tools fundamental to the science and practice of medicine. Clearly-defined pedagogical tools help students stay up-to-date on new material, and an emphasis on statistical software allows faster, more accurate calculation while putting the focus on the underlying concepts rather than the math. Students develop highly relevant skills in inferential and differential statistical techniques, equipping them with the ability to organize, summarize, and interpret large bodies of data. Suitable for both graduate and advanced undergraduate coursework, this text retains the rigor required for use as a professional reference.

The trade-investment-service-intellectual property (IP) nexus remains at the heart of economic development and the main features of which are global value chains (GVCs) and digitalisation. The protection of intellectual property rights (IPR) has become a critical issue not only for advanced economies but also for emerging markets. This edited volume contributes to the debates on IPR protection and economic development from the perspective of Association of Southeast Asian Nations (ASEAN) member states. The book provides insights into the mechanism and evidence on how effective IPR protection will increase economic and social welfare via promoting innovation activities and providing incentives to diffuse knowledge and transfer technologies. Written by economists and lawyers from the region, these experts share their latest findings and thoughts on how countries in Southeast Asia have been progressively improving IPR protection and increasing the interoperability of different IPR regimes through regional cooperation to facilitate business operations in the context of digital transformation.
