Congratulations on your selection of the Induction Dynamics™ SW1 Twin 15" Push-Pull closed-box subwoofer. Designed for both two-channel audio and digital surround sound, the SW1 features an innovative subwoofer configuration where dual subwoofers in each cabinet are mounted in a compound push-pull configuration. Mounting the drivers in this

wired out of phase will move the opposite way. Within the subwoofer box, this can cause damage at high power levels because the woofers are moving in different directions and the pressure inside the enclosure can allow the subwoofers to move too much and/or too little.

What Does Subwoofer Phase Mean? – MTX Audio

Push-pull sealed subwoofer | Home Theater Forum and Systems

(Like two rowers in a boat facing the same way allows for a greater push when strokes are matched up.) The first seemed like it might cause the speakers to fight against each other, reducing movement of the cone. (This being more like two rowers facing each other rowing towards the other then apart at the same time, hence going nowhere.)

The dual opposed driver

Bookmark File PDF 2 Way Push Pull Subwoofer

Induction Dynamics
design is the best way to do a subwoofer with 2 drivers. The reaction forces of the drives through the cabinet are cancelled out, meaning the cabinet is as stable as is possible, and driver output is maximised. To figure out what size cab is best, you need to choose a driver (s), then model it/them.

How to Place and Set Up Your Subwoofer | Digital Trends

One good way of finding a place for your subwoofer is to swap places with it. Put the subwoofer right up where you sit and turn on some bass-heavy music (or a bass-heavy movie soundtrack). Walk around the room until you find the place where the bass sounds best. Now, swap back by putting the subwoofer in the spot where the bass sounded best.

Bookmark File PDF 2 Way Push Pull Subwoofer

The second condition may hold true if you've suddenly acquired a 500 watt amplifier for your subs and your poor little 150W subwoofer just cannot handle that kind of power. In this case, you might switch from one 150W driver (such as a JL Audio 10W1v2) in a 0.625 cubic foot enclosure to four of the same drivers (2 isogroups) in the same sized ...

If two dimensions are known and the other is unset, we have another way to calculate volume for a specific speaker. For example, we'll say the customer wants to use our Competition 12" driver. We know that the recommended enclosure volume for a C-12 is 1.75 cu. ft., so for two it's 3.50 cu. ft.
