This thesis expands the concept of Computer-Aided Design/Computer-Aided Manufacturing (CAD/CAM) in naval shipbuilding to include maintenance. This inclusion is coupled with the integration of the design and manufacturing processes in the acronym CIDMM, which stands for Computer-Integrated Design, Manufacture and Maintenance. A methodology is proposed to identify and measure the tangible and intangible benefits derived from CAD/CAM in naval shipbuilding. The methodology is flexible enough to be applied to future CIDMM systems. A decision-aid for assessing the intangible benefits and a structure for computing the time benefits are proposed in the methodology. (Author).

This second edition provides an updated review on the current guidelines and practice standards for the clinical management of cardiovascular risk factors and prevention of cardiovascular diseases. Endorsed by the American Society for Preventive Cardiology, this practical textbook includes concise descriptions of major and newer risk factors, biomarkers, and best practices in the management and prevention of cardiovascular disease. The manual contains chapters on the epidemiology and risk factors for a variety of cardiovascular diseases including dyslipidemia, hypertension, diabetes, inflammation, and ischemic stroke. It examines behavioral factors, psychosocial stress, family history, nutrition, physical activity, smoking, alcohol use, and other sociocultural factors. In addition, the book discusses new imaging strategies in detection of cardiovascular disease, prevention of heart failure, atrial fibrillation, and peripheral arterial disease, and prevention for special populations. Throughout the manual, recommendations are based on guidelines endorsed by the American College of Cardiology, American Heart Association, and other major societies. The second edition of the ASPC Manual of Preventive Cardiology is an essential resource for physicians, medical students, residents, fellows, nurses, and other healthcare professionals and researchers in cardiology, primary care, health promotion and disease prevention, exercise physiology, and pharmacotherapy.

This new edition has been thoroughly updated and expanded to reflect the state-of-the-practice of CAD/CAM/CAE systems.;Maintaining and enhancing the style of presentation of the first edition, CAD/CAM/CAE Systems (second edition) aims to provide a broad, solid understanding of each critical issue

involved with the implementation and evaluation of systems; gives industry tested cost justification models to assess the feasibility of purchasing or leasing a system; supplies step-by-step explanations of every aspect of implementation, from initial facility planning to long-term maintenance; shows how to prepare personnel for a new system, including job skills, training stages, organization, and administration; illustrates a complete system audit, including five important approaches to determining overall success, six areas that can be judged separately, the dangers of benchmarking, and a two-year follow-up study; and more.;Furnishing the most up-to-date methods, CAD/CAM/CAE Systems, Second edition offers new features such as: a study of the proliferation of personal computers and their role in organizations; a discussion of the benefits and drawbacks of value added remarketers as an alternative to purchasing from conventional CAD/CAM companies; an examination of the cost-effectiveness of third party service organizations; and more. CAD/CAM/CAE Systems is intended as a guide for software, hardware, mechanical, manufacturing, industrial, and design engineers; draftspersons; managers; purchasing agents, acquisition personnel, and company officers responsible for deciding on CAD/CAM/CAE system implementation or augmentation; and graduate-level and continuing-education students in these disciplines.

The importance of CAD to electronics technology Computer-aided design (CAD) is one way of coping with the problem of how to design and build very complex systems. This problem is particularly acute in electronics technology. Designs are now (1984) said to be design-limited, rather than technology-limited. It can take months to generate a design for a chip, so that it might be obsolete before it can be manufactured. Manual design of large-scale integration (LSI) chips (circa 10,000 gates) is almost impossible. However, using current technology it is possible to produce chips having 250,000 gates. It is understandable, therefore, that there is great interest in improving existing CAD systems. Designers of CAD systems are concerned with formalizing and automating as much of the design task as possible. Automating design of any kind has long been acknowledged as a project fraught with intractable problems. A human designer has to have an understanding of the nature of the materials used in manufacture, a knowledge of common problems and well-tried solutions, and above all, creativity in producing new designs. Understanding, knowledge and creativity are three properties even the most artificially intelligent of computer programs have been entirely lacking in until very recently. Some people would deny computers these qualities entirely, on philosophical grounds (eg Dreyfus 1979; Searle 1981). There are few theories in cognitive psychology which can help.

This second edition is adheres to the guiding principles of the first edition while serving as a useful and up to date manual on the theory, performance and application of CCTA. Since the publication of the first edition of this work, cardiac CT angiography (CCTA) has come a long way. It is now a main stream, well established cardiac diagnostic imaging modality with wide spread acceptance and application.
