Chemistry LibreTexts

As a result of all experiments, it would be able to infer how the solubility rules could be used to explain the products of each precipitation reaction. A precipitation reaction results in the formation of an insoluble product.

Read Free Chemistry Lab

Whether a precipitate, an insoluble solid that separates from the solution, will form depends on the solubility of the solute. Precipitation reactions usually involve ionic compounds, and although all ionic compounds are strong electrolytes

they are not equally soluble.

Chemistry Lab Report

– Solubility Rules
and Precipitation ...

Precipitation refers to a chemical reaction that occurs in aqueous solution when two ions bond together to form an insoluble salt, which

Read Free Chemistry Lab

is known as the precipitate. A precipitation reaction can occur when two solutions containing different salts are mixed, and a cation/anion pair in the resulting combined solution forms an insoluble salt; this salt then precipitates out of solution.
