Economic Importance of Insects - Biology Discussion

Many plants rely on insect pollinators. Pollination is the process of moving the plants' pollen from the male parts of the plant to the female parts; this process is how the plants reproduce. Plants of economic importance that are pollinated by insects include most vegetables and fruits, along with fiber and hay crops.

Classification Of ...

Arthropods are of great direct and indirect importance to humans. The larger crustaceans—shrimps, lobsters, and crabs—are used as food throughout the world. Small planktonic crustaceans, such as copepods, water fleas, and krill, are a major link in the food chain between the photosynthetic phytoplankton and the larger carnivores, such as many fish and whales.
