Emotion And The Structure Of

On the contrary, emotions are structured in several ways: by their underlying neurology, by the judgments and evaluations that enter into them, by the behaviour that expresses or manifests them, and by the larger social contexts in which they occur. Thus, one might say that an emotion is an " integrated neuro-physiological-behavioral-evaluative-experiential-social phenomenon. " .

Emotion - The structure of emotions | Britannica
Current understanding of the psychology of emotions provides the basis for identifying critical features of the fiction film that trigger the general emotion system. Individual emotions are classified according to their position in the affect structure of a film -- a larger system of emotions produced by one particular film as a whole.

Emotion and the Structure of Narrative Film (Routledge ...
The social structures of emotion consist of the ways in which the larger social context determines an emotion ' s causes, content, modes of expression, and meaning. Even the basic emotions, which are generally assumed to have a neurological core, are shaped to a large extent by social factors. Read More on This Topic

Masaru Emoto (江本 勝, Emoto Masaru, July 22, 1943 – October 17, 2014) was a Japanese businessman, author and pseudo-scientist who claimed that human consciousness can affect the molecular structure of water.Emoto's book The Hidden Messages in Water published in 2004 was a New York Times best seller. Emoto's conjecture evolved over the years, and his early work revolved around pseudo ...

Introduced one hundred years ago, film has since become part of our lives. For the past century, however, the experience offered by fiction films has remained a mystery. Questions such as why adult viewers cry and shiver, and why they care at all about fictional characters -- while aware that they contemplate an entirely staged scene -- are still unresolved. In addition, it is unknown why spectators find some film experiences entertaining that have a clearly aversive nature outside the cinema. These and other questions make the psychological status of emotions allegedly induced by the fiction film highly problematic. Earlier attempts to answer these questions have been limited to a few genre studies. In recent years, film criticism and the theory of film structure have made use of psychoanalytic concepts which have proven insufficient in accounting for the diversity of film induced affect. In contrast, academic psychology -- during the century of its existence -- has made extensive study of emotional responses provoked by viewing fiction film, but has taken the role of film as a natural stimulus completely for granted. The present volume bridges the gap between critical theories of film on the one hand, and recent psychological theory and research of human emotion on the other, in an attempt to explain the emotions provoked by fiction film. This book integrates insights on the narrative structure of fiction film including its themes, plot structure, and characters with recent knowledge on the cognitive processing of natural events, and narrative and person information. It develops a theoretical framework for systematically describing emotion in the film viewer. The question whether or not film produces genuine emotion is answered by comparing affect in the viewer with emotion in the real world experienced by persons witnessing events that have personal significance to them. Current understanding of the psychology of emotions provides the basis for identifying critical features of the fiction film that trigger the general emotion system. Individual emotions are classified according to their position in the affect structure of a film -- a larger system of emotions produced by one particular film as a whole. Along the way, a series of problematic issues is dealt with, notably the reality of the emotional stimulus in film, the identification of the viewer with protagonists on screen, and the necessity of the viewer's cooperation in arriving at a genuine emotion. Finally, it is argued that film-produced emotions are genuine emotions in response to an artificial stimulus. Film can be regarded as a fine-tuned machine for a continuous stream of emotions that are entertaining after all. The work paves the way for understanding and, in principle, predicting emotions in the film viewer using existing psychological instruments of investigation. Dealing with the problems of film-induced affect and rendering them accessible to formal modeling and experimental method serves a wider interest of understanding aesthetic emotion -- the feelings that man-made products, and especially works of art, can evoke in the beholder.

Emotion and the Structure of Narrative Film: Film As An ...
Emotion and the Structure of Narrative Film: Film As An Emotion Machine: Tan, Ed S.: Amazon.sg: Books

Three aspects of the world to which people can react (events, actions of agents and objects) are used to characterize a wide range of emotions and reveal the cognitions that underlie distinct types of human emotion.

The past decades have seen significant advances in the sociological understanding of human emotion. Sociology has shown how culture and society shape our emotions and how emotions contribute to micro- and macro-social processes. At the same time, the behavioral sciences have made progress in understanding emotion at the level of the individual mind and body. Emotion and Social Structures embraces both perspectives to uncover the fundamental role of affect and emotion in the emergence and reproduction of social order. How do culture and social structure influence the cognitive and bodily basis of emotion? How do large-scale patterns of feeling emerge? And how do emotions promote the coordination of social action and interaction? Integrating theories and evidence from disciplines such as psychology, cognitive science, and neuroscience, Christian von Scheve argues for a sociological understanding of emotion as a bi-directional mediator between social action and social structure. This book will be of interest to students and scholars of the sociology of emotion, microsociology, and cognitive sociology, as well as social psychology, cognitive science, and affective neuroscience.

As a reference that contains original and innovative research on the sociology of emotion, this book will not only appeal to sociologists but also to scholars of psychology, psychiatry, anthropology, history, social work, and business/management. With contributions from experts in the field, this text examines the role and influence of emotion in everyday social circumstances. It poses clear questions and presents the contemporary theoretical developments and empirical research linking social structure and emotion. Comparable books are narrowly focused and less comprehensive, the breadth and depth of this new work is unmatched. *Explores the roles played by emotion in social arrangements (i.e., the power of emotions in psychology, finance, economics, etc...) *Poses clear questions and presents the newest theoretical developments and empirical research linking social structure and emotion *Contributions from experts in the field

Sample Text
Unique study re-evaluating the role of emotions in social interaction.

How does a person ' s way of thinking influence their personality, their values and their choice of career? In this important study, originally published in 1985, Susan Aylwin uses such questions as a starting point for elucidating the relationship between thought and feeling. Three modes of thought are compared in detail: inner speech, visual imagery and enactive imagery -- the last being an important addition to our understanding of mental representations. The structural characteristics of all three types are analysed using an association technique. Their affective aspects are then explored through a variety of means, including the analysis of daydreams, an examination of the evaluative complements of categorizing, the study of cognitive style, an exploration of such social feelings as embarrassment, and the experiential study of strong emotion. The author ends by integrating her findings, showing how thought and feeling are related aspects of the temporal organization of consciousness. Structure in Thought and Feeling is written in a lively and accessible style, and brings a refreshing perspective to many issues of central concern to psychologists interested in cognition, emotion, personality and psychotherapy.

Introduced one hundred years ago, film has since become part of our lives. For the past century, however, the experience offered by fiction films has remained a mystery.
