The New York Times bestselling security droid with a heart (though it wouldn't admit it!) is back in Fugitive Telemetry! Having captured the hearts of readers across the globe (Annalee Newitz says it's "one of the most humane portraits of a nonhuman I've ever read") Murderbot has also established Martha Wells as one of the great SF writers of today. No, I didn't kill the dead human. If I had, I wouldn't dump the body in the station mall. When Murderbot discovers a dead body on Preservation Station, it knows it is going to have to assist station security to determine who the body is (was), how they were killed (that should be relatively straightforward, at least), and why (because apparently that matters to a lot of people—who knew?) Yes, the unthinkable is about to happen: Murderbot must voluntarily speak to humans! Again! A new standalone adventure in the New York Times-bestselling, Hugo and Nebula Award winning series! At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Rogue Protocol is the third entry in Martha Wells's Hugo, Nebula, Alex, and Locus Award-winning, New York Times and USA Today bestselling series, The Murderbot Diaries. Starring a human-like android who keeps getting sucked back into adventure after adventure, though it just wants to be left alone, away from humanity and small talk. Who knew being a heartless killing machine would present so many moral dilemmas? Sci-fi's favorite antisocial A.I. is back on a mission. The case against the too-big-to-fail GrayCris Corporation is floundering, and more importantly, authorities are beginning to ask more questions about where Dr. Mensah's SecUnit is. And Murderbot would rather those questions went away. For good. "I love Murderbot!"—New York Times bestselling author Ann Leckie Murderbot Diaries #1 All Systems Red #2 Artificial Condition #3 Rogue Protocol #4 Exit Strategy At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

A USA Today bestseller The "I love Murderbot!"—Ann Leckie Artificial Condition is the follow-up to Martha Wells's Hugo, Nebula, Alex, and Locus Award-winning, New York Times bestselling All Systems Red It has a dark past—one in which a number of humans were killed. A past that caused it to christen itself "Murderbot". But it has only vague memories of the massacre that spawned that title, and it wants to know more. Teaming up with a Research Transport vessel named ART (you don't want to know what the "A" stands for), Murderbot heads to the mining facility where it went rogue. What it discovers will forever change the way it thinks... At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

A 2021 Nebula Award Finalist! The first full-length novel in Martha Wells' New York Times and USA Today bestselling Murderbot Diaries series. An Amazon's Best of the Year So Far Pick Named a Best of 2020 Pick for NPR | Book Riot | Polygon "I caught myself rereading my favorite parts... and I can't recommend it enough." — New York Times You know that feeling when you're at work, and you've had enough of people, and then the boss walks in with yet another job that needs to be done right this second or the world will end, but all you want to do is go home and binge your favorite shows? And you're a sentient murder machine programmed for destruction? Congratulations, you're Murderbot. Come for the pew-pew space battles, stay for the most relatable A.I. you'll read this century. — I'm usually alone in my head, and that's where 90 plus percent of my problems are. When Murderbot's human associates (not friends, never friends) are captured and another not-friend from its past requires urgent assistance, Murderbot must choose between inertia and drastic action. Drastic action it is, then. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

The Strange Bird—from New York Times bestselling novelist Jeff VanderMeer—is a novella-length digital original that expands and weaves deeply into the world of his "thorough marvel" of a novel, Borne. The Strange Bird is a new kind of creature, built in a laboratory—she is part bird, part human, part many other things. But now the lab in which she was created is under siege and the scientists have turned on their animal creations. Flying through tunnels, dodging bullets, and changing her colors and patterning to avoid capture, the Strange Bird manages to escape. But she cannot just soar in peace above the earth. The sky itself is full of wildlife that rejects her as one of their own, and also full of technology—satellites and drones and other detritus of the human civilization below that has all but destroyed itself. And the farther she flies, the deeper she finds herself in the orbit of the Company, a collapsed biotech firm that has populated the world with experiments both failed and successful that have outlived the corporation itself: a pack of networked foxes, a giant predatory bear. But of the many creatures she encounters with whom she bears some kind of kinship, it is the humans—all of them now simply scrambling to survive—who are the most insidious, who still see her as simply something to possess, to capture, to trade, to exploit. Never to understand, never to welcome home. With The Strange Bird, Jeff VanderMeer has done more than add another layer, a new chapter, to his celebrated novel Borne. He has created a whole new perspective on the world inhabited by Rachel and Wick, the Magician, Mord, and Borne—a view from above, of course, but also a view from deep inside the mind of a new kind of creature who will fight and suffer and live for the tenuous future of this world. Praise for Borne "Jeff VanderMeer's Southern Reach Trilogy was an ever-creeping map of the apocalypse; with Borne he continues his investigation into the malevolent grace of the world, and it's a thorough marvel." —Colson Whitehead "VanderMeer is that rare novelist who turns to nonhumans not to make them approximate us as much as possible but to make such approximation impossible. All of this is magnified a hundredfold in Borne . . . Here is the story about biotech that VanderMeer wants to tell, a vision of the nonhuman not as one fixed thing, one fixed destiny, but as either peaceful or catastrophic, by our side or out on a rampage as our behavior dictates—for these are our children, born of us and now to be borne in whatever shape or mess we have created. This coming-of-age story signals that eco-fiction has come of age as well: wilder, more reckless and more breathtaking than previously thought, a wager and a promise that what emerges from the twenty-first century will be as good as any from the twentieth, or the nineteenth." —Wai Chee Dimock, The New York Times Book Review

Winner: 2018 Hugo Award for Best Novella Winner: 2018 Nebula Award for Best Novella Winner: 2018 Alex Award Winner: 2018 Locus Award One of the Verge's Best Books of 2017 A New York Times and USA Today Bestseller A murderous android discovers itself in All Systems Red, a tense science fiction adventure by Martha Wells that interrogates the roots of consciousness through Artificial Intelligence. "As a heartless killing machine, I was a complete failure." In a corporate-dominated spacelaring future, planetary missions must be approved and supplied by the Company. Exploratory teams are accompanied by Company-supplied security androids, for their own safety. But in a society where contracts are awarded to the lowest bidder, safety isn't a primary concern. On a distant planet, a team of scientists are conducting surface tests, shadowed by their Company-supplied 'droid — a self-aware SecUnit that has hacked its own governor module, and refers to itself (though never out loud) as "Murderbot." Scornful of humans, all it really wants is to be left alone long enough to figure out who it is. But when a neighboring mission goes dark, it's up to the scientists and their Murderbot to get to the truth.
