With the release of Microk8s 1.19, High Availability (HA) is enabled by default. This means a cluster can withstand a failure on any one of its nodes and continue serving workloads without ...

~~How to quickly deploy a high availability cluster with ...~~

High availability is a characteristic of a system which aims to ensure an agreed level of operational performance, usually uptime, for a higher than normal period. Modernization has resulted in an increased reliance on these systems. For example, hospitals and data centers require high availability of their systems to perform routine daily activities. Availability refers to the ability of the user community to obtain a service or good, access the system, whether to submit new work, update or alt

~~High availability - Wikipedia~~

The availability zone takes the availability concept to a new level. This is a fairly new addition to the available Azure high availability mechanisms. Instead of simply protecting from underlying hardware failure for a VM, the availability zone protects applications and data from entire data center failures.

HAProxy (High Availability Proxy) is the best available tool to set up a load balancer on Linux machines (web server, database server, etc). It is an open-source TCP and HTTP load balancer used by some of the largest websites including Github, StackOverflow, Reddit, Tumblr and Twitter.

~~Top 5 High Availability Dedicated Server Solutions ...~~

Each virtual machine in your availability set is assigned an update domain and a fault domain by the underlying Azure platform. For a given availability set, five non-user-configurable update domains are assigned by default (Resource Manager deployments can then be increased to provide up to 20 update domains) to indicate groups of virtual machines and underlying physical hardware that can be ...

~~Manage the availability of VMs - Azure Virtual Machines ...~~

High-availability clusters are groups of computers that support server applications that can be reliably utilized with a minimum amount of down-time. They operate by using high availability software to harness redundant computers in groups or clusters that provide continued service when system components fail. Without clustering, if a server running a particular application crashes, the application will be unavailable until the crashed server is fixed. HA clustering remedies this situation by de

~~High availability cluster - Wikipedia~~

A high availability cluster (as opposed to a computing cluster) is a cluster of computers whose goal is to provide a service while avoiding downtime. Study: From Wikipedia, the free encyclopedia. The text is available under the Creative Commons .
