There is a lot to explain in a fundoscopy examination. Keep your language simple and concise. For example: 'I will be using this instrument which has a magnifying glass to try to see the back of your eye. I will need to come close to your eye and shine a light. This can be a little uncomfortable but not painful.

The pupil is a hole through which the eye's interior will be viewed. Opening the pupil wider is a simple and effective way to better see the structures behind it. Therefore, dilation of the pupil is often accomplished with medicated eye drops before fundoscopy. However, although dilated fundus examination is ideal, undilated examination is more convenient and is also helpful, and it is the most common type in primary care. An alternative or complement to ophthalmoscopy is to perform a fundus pho

A fundoscopic examination was a type of medical test conducted on Earth in the 20th century. It was used in cases of head injury to evaluate the extent of the damage and determine an appropriate remedy, if one existed. By the 23rd century, however, it was considered to be "unrevealing" in some cases.

Fundoscopy is an essential examination and can assist in the diagnosis of many diseases. I In this particular case, early fundoscopy could have prevented loss of vision. Experts commented that if Dr Q had carried out fundoscopy in his initial consult (as he said he did as part of a cranial nerve exam) then he failed to identify papilloedema, as it is likely to have been present at this time.
