To support Client 's valuation of sites where limited data is available, we have developed a High Level Abnormal Development Appraisals (HILDA) tool to model common dereliction and remediation requirements and generate budget costs based on the HCA Guidance on dereliction, demolition and remediation costs. 3rd edition, 2015 adapted based on our technical experience.

The Congress "Arsenic in the Environment" offers an international, multi- and interdisciplinary discussion platform for research and innovation aimed towards a holistic solution to the problem posed by the environmental toxin arsenic, with considerable societal impact. The congress has focused on cutting edge and breakthrough research in physical, chemical, toxicological, medical, agricultural and other specific issues on arsenic across a broader environmental realm. The Congress "Arsenic in the Environment" was first organized in Mexico City (As2006) followed by As2008 in Valencia, Spain, As2010 in Tainan, Taiwan, As2012 in Cairns, Australia and As2014 in Buenos Aires, Argentina. The 6th International Congress As2016 was held June 19-23, 2016 in Stockholm, Sweden and was entitled Arsenic Research and Global Sustainability. The Congress addressed the broader context of arsenic research along the following themes: Theme 1: Arsenic in Environmental Matrices and Interactions (Air, Water, Soil and Biological Matrices) Theme 2: Arsenic in Food Chain Theme 3: Arsenic and Health Theme 4: Clean Water Technology for Control of Arsenic Theme 5: Societal issues, Policy Studies, Mitigation and Management Long term exposure to low-to-medium levels of arsenic via contaminated food and drinking water can have a serious impact on human health and globally, more than 100 million people are at risk. Since the end of the 20th century, arsenic in drinking water (mainly groundwater) has emerged as a global health concern. In the past decade, the presence of arsenic in plant foods – especially rice – has gained increasing attention. In the Nordic countries in particular, the use of water-soluble inorganic arsenic chemicals (e.g. chromated copper arsenate, CCA) as wood preservatives and the mining of sulfidic ores have been flagged as health concern. The issue has been accentuated by discoveries of naturally occurring arsenic in groundwater, primarily in the private wells, in parts of the Fennoscandian Shield and in sedimentary formations, with potentially detrimental effects on public health. Sweden has been at the forefront of research on the health effects of arsenic, technological solutions for arsenic removal, and sustainable mitigation measures for developing countries. Hosting this Congress in Sweden was also relevant because historically Sweden has been one of the leading producer of As₂O₃ and its emission from the smelting industries in northern Sweden and has successfully implemented actions to reduce the industrial emissions of arsenic as well as minimizing the use of materials and products containing arsenic in since 1977. The Congress has gathered professionals involved in different segments of interdisciplinary research in an open forum, and strengthened relations between academia, industry, research laboratories, government agencies and the private sector to share an optimal atmosphere for exchange of knowledge, discoveries and discussions about the problem of arsenic in the environment and catalyze the knowledge generation and innovations at a policy context to achieve the goals for post 2015 Sustainable Development.

Development of brownfield land can address shortfalls in the availability of land for housing and other buildings, but these sites present a range of problems that must be overcome in any successful development. Land, Development and Design addresses all of the issues in the context of the reuse of urban land, providing a solid, readable overview of the principles and practice of the regeneration of brownfield sites. Divided into four parts, covering the development process and planning policies; site assessment, risk analysis and remediation of contaminated land; development issues and finally design issues, the principal focus of the book is on the reuse of urban land. It includes a full discussion of contaminated land, so that readers are aware of the issues and options available to resolve this problem. Land, Development and Design has been extensively revised since its first edition and provides final year undergraduate and postgraduate students of both planning

and surveying, as well as professional planners, surveyors and developers, a solid and readable overview of the principles and practice of regeneration of the built environment.

In this classic collection, some of the world's most eminent critics of development review the key concepts of the development discourse. Each essay examines one concept from a historical and anthropological point of view, highlights its particular bias, and exposes its historical obsolescence and intellectual sterility. The authors argue that a bidding farewell to the whole Eurocentric development idea is urgently needed, in order to liberate people's minds in both North and South for bold responses to the environmental and ethical challenges now confronting humanity. The combined result forms a must-read invitation to experts, grassroots movements and students of development to recognize the tainted glasses they put on whenever they participate in the development discourse.

"Development Control" is a comprehensive introductory text for students of planning and related subjects. Drawing widely on the literature - the approach and treatment are very much geared to the needs of students on courses, rather than focusing on practical and "how-to-do-it" issues. It should be of interest to students in schools of planning, the built environment, estate management, land economy and other related subjects.

This book synthesizes urban design and urban regeneration by examining the revitalization of a number of historic urban quarters. Its focus is on quarters or areas where there is a significant number of historic buildings concentrated in a small area; with places and area-based approaches. Many cities have such quarters that confer on them a sense of place and identity through their historic continuity and cultural associations. The quarters are often an integral element of the city's image and identity. The lessons and observations from the experience of the revitalization of such historic urban quarters forms the core of this book with a number of case study examples from North America and Europe showing a variety of approaches to and outcomes of revitalization.

The Italian General Giulio Douhet reigns as one of the twentieth century's foremost strategic air power theorists. As such scholars as Raymond Flugel have pointed out, Douhet's theories were crucial at a pivotal pre-World War II Army Air Force institution, the Air Corps Tactical School.

Traditional farmsteads and farm buildings make an important contribution to the remarkably varied character of England's landscape. They are fundamental to its sense of place and local distinctiveness. Although the majority of traditional farm buildings have now become partly or wholly redundant for modern agricultural purposes unsupported by income to fund their maintenance and repair, they often have the potential to be of economic value in terms of their capacity to accommodate a variety of new uses. Successful adaptive reuse of any farmstead or building depends upon an understanding of its significance, its relationship to the wider landscape setting and its sensitivity to and capacity for change. This advice is aimed at owners of farm buildings, building professionals and local authority planning and conservation officers. It explains how significance can be retained and enhanced through well-informed maintenance and sympathetic development, provided that repairs, design and implementation are carried out to a high standard. This replaces *The Conversion of Traditional Farm Buildings* published September 2006.

The Challenge of Slums presents the first global assessment of slums, emphasizing their problems and prospects. Using a newly formulated operational definition of slums, it presents estimates of the number of urban slum dwellers and examines the factors at all level, from local to global, that underlie the formation of slums as well as their social, spatial and economic characteristics and dynamics. It goes on to evaluate the principal policy responses to the slum challenge of the last few

Download File PDF Guidance On Dereliction Demolition And Remediation Costs

decades. From this assessment, the immensity of the challenges that slums pose is clear. Almost 1 billion people live in slums, the majority in the developing world where over 40 per cent of the urban population are slum dwellers. The number is growing and will continue to increase unless there is serious and concerted action by municipal authorities, governments, civil society and the international community. This report points the way forward and identifies the most promising approaches to achieving the United Nations Millennium Declaration targets for improving the lives of slum dwellers by scaling up participatory slum upgrading and poverty reduction programmes. The Global Report on Human Settlements is the most authoritative and up-to-date assessment of conditions and trends in the world's cities. Written in clear language and supported by informative graphics, case studies and extensive statistical data, it will be an essential tool and reference for researchers, academics, planners, public authorities and civil society organizations around the world.

This extensively revised fourteenth edition incorporates the major changes to planning introduced by the 2004 Planning and Compulsory Purchase Act and the government's mission to change the culture of planning. It provides a critical discussion of the system of planning – the institutions involved, the plans and other instruments that are used, the procedures for controlling development and land use change, and the mechanisms for implementing policy and proposals. It reviews current policy for sustainable development, housing and the Sustainable Communities Plan, the Barker Review, urban renewal and regeneration, the renaissance of city and town centres, the countryside, transport, and the heritage. Contemporary arrangements are explained with reference to their historical development, the influence of the European Union, the Labour government and changing social and economic demands for land use change. Detailed consideration is given to: the nature of planning and its historical evolution policies for managing urban growth and delivering housing sustainable development principles for planning social and economic development of the countryside conserving the heritage changes to the profession and education of planners. Special attention is given to the objective of improving the co-ordination of government policies through the spatial planning approach. The many recent changes to the system are explained in detail, and each chapter ends with notes on further reading, lists of official publications and an extensive bibliography, all of which enhances its reputation as the bible of British Planning.
