Guided Imagery for Relaxation and Stress Management

Guided imagery is a focused practice that involves each of the five senses to ignite positive healing messages throughout the mind and body. The practice is often interchanged with visualization, self-hypnosis and guided meditation, but it has its own set of techniques. The benefits of guided imagery are vast | there is research that shows the practice can reduce fear and anxiety, lessen the frequency of headaches and has been proven to decrease psychological distress in cancer patients.

A further study investigated the effectiveness of a therapy called Guided Imagery and Music on stress. Specifically, the researchers investigated people on long-term stress-related sick leave. They write in the Journal of Music Therapy that, "Long-term stress-related sick leave constitutes a serious health threat and an economic burden on both the single worker and the society.

The Benefits of Guided Visualisations and Imagery | The ...

Mental imagery (varieties of which are sometimes colloquially referred to as "visualizing," "seeing in the mind's eye," "hearing in the head," "imagining the feel of," etc.) is quasi-perceptual experience; it resembles perceptual experience, but occurs in the absence of the appropriate external stimuli.

Mental Imagery (Stanford Encyclopedia of Philosophy)

Guided mental imagery has been supported as an effective means to treat intrusive mental imagery either by producing tolerance/desensitization (voluntarily imagining stressful images) [92] or by positively transforming the intrusive imagery content [67] [93] [94].
