An awe-inspiring, Page 29/46

unforgettable journey of scientific exploration from Brian Cox and Jeff Forshaw, the international bestselling authors of Why Does E=MC2? and The Quantum Universe, with 55 black-&-white and 45 full-color pages featuring photographs, diagrams, maps, tables, and graphs We dare to imagine a time before Page 30/46

the Big Bang, when the entire universe was compressed into a space smaller than an atom. And now, as Brian Cox and Jeff Forshaw show, we can do more than imagine: we can understand, Universal takes us on an epic journey of scientific exploration. It reveals how we can all come to grips with some of the Page 31/46

most fundamental questions about our Earth, Sun, and solar system--and the starfilled galaxies beyond. How big is our solar system? How quickly is space expanding? How big is the universe? What is it made of? Some of these questions can be answered on the basis of observations you can make in your Page 32/46

own backyard. Other answers draw on the astonishing information now being gathered by teams of astronomers operating at the frontiers of the known universe. At the heart of all this lies the scientific method. Science reveals a deeper beauty and connects us to each other, to our world, and to our universe. Science Page 33/46

reaches out into the unknown. As Universal demonstrates, if we dare to imagine, we can do the same.

Recommended for viewing on a colour tablet. Professor Brian Cox is back with another insightful and mind-blowing exploration of space. This time he shows us Page 34/46

our universe as we've never seen it before.

What is Life? Where did it come from? Why does it end?

In The Quantum
Universe, Brian Cox
and Jeff Forshaw
approach the world of
quantum mechanics in
the same way they did
in Why Does E=mc2?
Page 35/46

and make fundamental scientific principles accessible and fascinating[]to everyone. The subatomic realm has a reputation for weirdness, spawning any number of profound misunderstandings, journeys into Eastern mysticism, and woolly pronouncements on the interconnectedness of all things. Cox and Page 36/46

Forshawls contention? There is no need for quantum mechanics to be viewed this way. There is a lot of mileage in the [weirdness] of the quantum world, and it often leads to confusion and, frankly, bad science. The Quantum Universe cuts through the Wu Li and asks what observations of the natural world made it. Page 37/46

necessary, how it was constructed, and why we are confident that, for all its apparent strangeness, it is a good theory. The quantum mechanics of The Quantum Universe provide a concrete model of nature that is comparable in its essence to Newton s laws of motion, Maxwell s theory of Page 38/46

electricity and Brian magnetism, and Einstein stheory of relativity.

The bestselling authors of Wonders of the Universe are back with another blockbuster, a groundbreaking exploration of our Solar System as it has never been seen before. A companion book to the Page 39/46

highly anticipated BBC series.

Recommended for viewing on a colour tablet. In Wonders of the Solar System [] the book of the acclaimed BBC TV series [] Professor Brian Cox will take us on a journey of discovery where alien worlds from your imagination become Page 40/46

places we can see, feel and visit.

Even-handed, up-todate, and clearly written. ... If you want to navigate between the Scylla and Charybdis of Neanderthal controversies, youlll find no better guide. Brian Fagan, author of Cro-Magnon In recent years, the common Page 41/46

perception of the Neanderthal has been transformed thanks to new discoveries and paradigm-shattering scientific innovations. It turns out that the Neanderthals behavior was surprisingly modern: they buried the dead, cared for the sick, hunted large animals in their prime, harvested seafood, and spoke.

Page 42/46

Meanwhile, advances in DNA technologies have forced a reassessment of the Neanderthals place in our own past. For hundreds of thousands of years, Neanderthals evolved in Europe very much in parallel to the Homo sapiens line evolving in Africa, and, when both species made their first forays into Asia, the Neanderthals Page 43/46

may even have had the upper hand. Here, Dimitra Papagianni and Michael A. Morse look at the Neanderthals through the full dramatic arc of their existence from their evolution in Europe to their expansion to Siberia, their subsequent extinction, and ultimately their revival in popular novels, Page 44/46

cartoons, cult movies, and TV commercials.

A deeply fascinating, engaging, and highly accessible explanation of Einstein's equation, using everyday life to explore the principles of physics.
