Molti sono convinti che un bravo manager o imprenditore, in virtù dei successi ottenuti dalle sue aziende, sia automaticamente un attendibile consigliere economico o addirittura un ottimo politico a cui affidare senza indugi le sorti di una nazione. È una falsità che continuamente si alimenta nonostante la storia recente in tutto il mondo, Italia compresa, ne abbia mostrato l'inconsistenza. Con lo stile brillante e la logica serrata che hanno fatto di lui uno dei pochi economisti letti e apprezzati dal grande pubblico, Paul Krugman smonta questo grande mito contemporaneo, dimostrando con esempi pratici e decisivi le enormi differenze tra il mondo aperto e aggressivo delle strategie imprenditoriali e quello chiuso delle grandi politiche nazionali. In un periodo in cui la fiducia negli economisti, nelle loro analisi e nelle loro previsioni, sembra calare drasticamente, Paul Krugman ripercorre la lezione di John Maynard Keynes e rivendica con forza la dignità di una disciplina tecnica e difficile, ancora in grado di offrire risposte convincenti per interpretare e migliorare il mondo.

The first part of the study is dedicated to the US economy from the end of the Second World War to the present time; similarities and differences between the crisis of 1929 and the current one are examined. The second part is dedicated to Italy and Europe and, first of all, to the Euro. Advantages and disadvantages of the new currency are debated. As far as Italy is concerned, since the advent of the Euro, it has experienced a long period of stagnation. The new currency is for sure at least part of the problem. At the end of the study, three possible solutions to the crisis situation are examined in decreasing order of preference. The first is the reform of the Euro and of the European Central Bank which should have the same powers as every other central bank. The second would see Italy and, perhaps, other countries, leave the Euro. The last and the most disadvantageous would be to play along with Germany and adopt drastic economic measures to create trade surpluses at the expense of some countries. Clemence M. Apollonij Ghetti was born in Rome on the 27th June 1998. He attended Italian primary schools in Rome, from 2004 till 2013, while he became self-taught in economics. When he was just 15 years old, he wrote this book during the summer. In November 2013 he presented applications and was admitted to Downside School, one of England's oldest and most distinguished schools. He started attending in the present academic year 2014-2015 the lower sixth form. At the Prize Day of May 2015, at the end of the school year, he has won the prize for Economics.

Current economic theories do not provide the elements to understand the causes and processes that provoke economic crises. In this book, Maurizio Pasquino explains the underlying reasons and introduces the new concept of income dispersion. Income dispersion provides a much broader vision of how an economic system works, setting the bases for a more efficient way of identifying and resolving the problems of the society in which we live today.

This book provides a comprehensive methodological and philosophical inquiry into, and a comprehensive scientific analysis of, the fundamental economic dynamics of capitalism as a world system.

Labour Law and Sustainable Development is a detailed reconstruction of the regulatory framework and jurisprudential findings of sustainable development at the international, European and national level. The global crisis of the past decade has underlined the social unsustainability of the ultra-liberalistic theories through which the labour law deregulation represents the precondition for social and economic development coherent with the globalization imperatives. It is no exaggeration to assert that the existing foundations of labour law have been irreversibly compromised. It is essential to find a way out of the crisis, at the same time defining the founding values of new sustainable labour law. In linking labour law with the sustainability paradigm, this provocative book promises to widen the scope and terms of the reconciliation of interests, taking into account the multiplicity of the stakeholders interested in economic, social and environmental issues and, in particular, to practise an approach that achieves intergenerational equity. What's in this book: In an unprecedented comparative study, including case law, of the network of principles, agreements, practices and norms concerning sustainable development and its different economic and social implications, the author examines such facets as the following: sustaining solidarity and equality of opportunity in current and emerging work situations; enhancing individual autonomy in the current world of (subordinate but independent) labour; reconciling personal needs, flexible organization of companies and reduction of external and internal costs to companies; collective action for the regulation of labour relations allowing for the exercise of individual autonomy; involving entire populations that have been so far excluded in the world scene; developing a sustainable pension system to promote intergenerational solidarity; implementing flexicurity policies positively; social clauses of international trade treaties; undoing the profound contradiction of gender and wage inequalities; and promoting corporate social responsibility. The objective of this book is to provide the reader with a reasoning basis to assess whether the choice to elect sustainable development as a new paradigm of reference for labour law is feasible, and if, in particular, this choice can be useful in order to define the founding values of a new (unsustainable) labour law. How this will help you: Using an interdisciplinary approach, the author emphasizes need to consider the various dimensions of sustainability together, not only original environmental but also the economic and social dimensions. This book offers a real strategic leap for both legislators and social actors, in particular leading the way to avoiding a fracture of the generational pact that has held together modern societies. Although the book presents a profound academic contribution to the analysis of labour law realities and trends, it will also be welcomed by corporate lawyers, judges, human rights experts, trade unionists, business managers, entrepreneurs and consultants interested in the issues of labour, sustainable development and social rights.

This volume focuses on specialist translation - one of the areas of translation in greatest demand in our age of globalization. The 16 chapters deal not only with the classical domains of science and technology, law, socio-politics and medicine but also with lesser researched areas such as archeology, geography, nutrigenomics and others. As a whole, the book achieves a blend of theory and practice. It addresses a variety of issues such as translation strategy based on text type and purpose, intercultural transfer and quality assessment, as well as textual and terminological issues in bilingual and multilingual settings, including international organizations and the European Union. Today translation competence presupposes multidisciplinary skills. Whereas some chapters analyze the linguistic features of special-purpose texts and their function in specialized communication, others show how specialized translation has changed as a result of globalization and how advances in technology have altered terminology research and translation processing.
