This collection focuses on the characterization of minerals, metals, and materials as well as the application of characterization results on the processing of these materials. Focused sessions within the symposia include those centered on ferrous metals, non-ferrous metals, soft materials, ceramics, clays, composites, and minerals. In addition, sessions will focus exclusively on characterization concerns in the extraction, processing, and environmental application of materials. Finally, method development in characterization will be explored.

Examines the initiation and growth of fatigue cracks and the fracture toughness of advanced materials such as silicon nitride, special alloys and steels, thermoplastics, and graphite-epoxy composites; and explains several non-destructive techniques to evaluate such materials for manufacturing defect

The definitive resource for survey questionnaire testing and evaluation Over the past two decades, methods for the development, evaluation, and testing of survey questionnaires have undergone radical change. Research has now begun to identify the strengths and weaknesses of various testing and evaluation methods, as well as to estimate the methods' reliability and validity. Expanding and adding to the research presented at the International Conference on Questionnaire Development, Evaluation and Testing Methods, this title presents the most up-to-date knowledge in this burgeoning field. The only book dedicated to the evaluation and testing of survey questionnaires, this practical reference work brings together the expertise of over fifty leading, international researchers from a broad range of fields. The volume is divided into seven sections: Cognitive interviews Mode of administration Supplements to conventional pretests Special populations Experiments Multi-method applications Statistical modeling Comprehensive and carefully edited, this groundbreaking text offers researchers a

solid foundation in the latest developments in testing and evaluating survey questionnaires, as well as a thorough introduction to emerging techniques and technologies.

With the national reform and research agendas occurring in teacher education, one of the most important areas needing theoretical analysis and empirical research is assessment and evaluation. New initiatives in the education of teachers and new roles in professional practice demand new means to assess both learning and performance. In recognition of this demand, this book is designed to examine how students can best be selected for and evaluated while in teacher education programs. The book reviews and synthesizes the existing knowledge in teacher education assessment, as well as presents new inquiry to extend and deepen this knowledge.

Ceramics are unique products, in a wide variety of forms, with an ever increasing range of applications. Ceramics in Energy Applications contains contributions on material solutions to new and existing applications of interest to energy suppliers and users. The book considers the latest developments in ceramics materials for both high and low temperatures for a wide variety of uses by a wide array of energy technology users. Topics covered include new developments and applications, power generation, energy saving and heat transfer, sensors and catalysts, and evaluation and performance.

Psychological Testing: A Practical Approach to Design and Evaluation offers a fresh and innovative approach for graduate students and faculty in the fields of testing, measurement, psychometrics, research design, and related areas of study. Author Theresa J.B. Kline guides readers through the process of designing and evaluating a test, while ensuring that the test meets the highest professional standards. The author uses simple, clear examples throughout and fully details the required statistical analyses. Topics include—but are not limited to—design of item stems and responses; sampling strategies; classical and modern test theory; IRT program examples; reliability of tests and raters; validation using content, criterion-related, and factor analytic approaches; test and item bias; and professional and ethical issues in testing.
