Driven by the increasing importance of discussions around 'impact' and its meaning and implications for history, The Impact of History? brings together established and new voices to raise relevant questions, issues and controversies for debate. The chapters are articulated around the themes of public history, the politics of history, the role of history in the shaping of learning and the situation of history in the changing world of education. While this subject is driven differently by the research bodies and councils of different countries, similar debates about the value and place of the academy in society are taking place in the UK, the USA and Europe as well as in other parts of the world. Chapters cover diverse areas of history from this perspective including: public history national histories new technologies and the natural sciences campaigning histories the impact agenda. This collection is a political and intellectual intervention at a time when scholars and readers of history are being asked to explain why history matters and it seeks to intervene in the debates on 'impact', on education and on the role of the past in the shaping of our future. Bringing together leading authors from a wide range of fields, The Impact of History? is an accessible and engaging yet polemical and thought-provoking overview of the role of history in contemporary society.
--

Since the nineteenth century, the development of international humanitarian law has been marked by complex entanglements of legal theory, historical trauma, criminal prosecution, historiography, and politics. All of these factors have played a role in changing views on the applicability of international law and human-rights ideas to state-organized violence, which in turn have been largely driven by transnational responses to German state crimes. Here, Annette Weinke gives a groundbreaking long-term history of the political, legal and academic debates concerning German state and mass violence in the First World War, during the National Socialist era and the Holocaust, and under the GDR.

This book draws on both traditional and emerging fields of study to consider consider what a grounded definition of quantitative and qualitative research in the Digital Humanities (DH) might mean; which areas DH can fruitfully draw on in order to foster and develop that understanding; where we can see those methods applied; and what the future directions of research methods in Digital Humanities might look like. Schuster and Dunn map a wide-ranging DH research methodology by drawing on both [traditional] fields of DH study such as text, historical sources, museums and manuscripts, and innovative areas in research production, such as knowledge and technology, digital culture and society and history of network technologies. Featuring global contributions from scholars in the United Kingdom, the United States, Europe and Australia, this book draws together a range of disciplinary perspectives to explore the exciting developments offered by this fast-evolving field. Routledge International Handbook of Research Methods in Digital Humanities is essential reading for anyone who teaches, researches or studies Digital Humanities or related subjects.

This internationally conducted study of the latest construction industry practices addresses a broad range of Information and Communication Technology applications. Drawing on research conducted in the US and UK, this book presents the state of the art of various ebusiness processes, and examines BIM, virtual environments and mobile technologies. Innovation is a theme that runs throughout this book, so in addition to the direct impact of these new technical achievements, it also considers the management styles that helped them to emerge. Examples from industry are illustrated with case studies and presented alongside research from some of the best known academics in this field. This book is essential reading for all advanced students and researchers interested in how ICT is changing construction management and the construction industry.

"e;Revisionist"e; or "e;alternative"e; historians have increasingly questioned elements of the Singapore Story - the master narrative of the nation's political and socioeconomic development since its founding by the British in 1819. Much criticism focuses especially on one defining episode of the Story: the internal security dragnet mounted on 2 February 1963 against Communist United Front elements on the island, known to posterity as Operation Coldstore. The revisionists claim that Coldstore was mounted for political rather than security reasons and actually destroyed a legitimate Progressive Left opposition - personalized by the charismatic figure of Lim Chin Siang - rather than a dangerous Communist network as the conventional wisdom holds. Relying on both declassified and some previously unseen classified sources, this book challenges revisionist claims, reiterating the historic importance of Coldstore in helping pave the way for Singapore's remarkable journey from Third World status to First in a single generation.

Nearly 50 students, colleagues, and friends of Nicholas Postgate join in tribute to an Assyriologist and Archaeologist who has had a profound influence on both disciplines. His work and scholarship are strongly felt in Iraq, where he was the Director of the British School of Archaeology, in the United Kingdom, where he is Emeritus Professor of Assyriology in the University of Cambridge, and in the subject internationally. He has fostered close collaboration with colleagues in Turkey and Iraq, where he has been involved in archaeological investigation, always seeking to meld the study of texts with that of material remains. The essays embrace the full range of Postgate's interests, including government and administration, art history, population studies, the economy, religion and divination, foodstuffs, ceramics, and Akkadian and Sumerian language\in a word, all of ancient Mesopotamian civilisation.

This book begins discussion at a point where many civil\military conversations end. Hartwell identifies underlying dynamics, key issues, and challenges that civilian and military organizations encounter when negotiating their roles in real and virtual volatile environments. These include managing expectations, understanding organizational missions and cultures, building trust, and exploring different approaches to violence. The impact of applied technologies on decision making processes and interventions is discussed in terms of recent and future complex crises. Linking earlier history to current discussions, this study makes an important contribution by reframing issues and outlining strategies to avoid unintended consequences and more effectively protect civilians in future operations. While geographic focus is on the Middle East, Africa, Central Asia, and Asia-Pacific, the core issues are applicable to negotiating civil\military relationships in a wide range of environments.

As humanitarian needs continue to grow rapidly, humanitarian action has become more contested, with new actors entering the field to address unmet needs, but also challenging long-held principles and precepts. This volume provides detailed empirical comparisons between emerging and traditional humanitarian actors. It sheds light on why and how the emerging actors engage in humanitarian crises and how their activities are carried out and perceived in their transnational organizational environment. It develops and applies a conceptual framework that fosters research on humanitarian actors and the humanitarian principles. In particular, it simultaneously refers to theories of organizational sociology and international relations to identify both the structural and the situational factors that influence the motivations, aims and activities of these actors, and their different levels of commitment to the traditional humanitarian principles. It thus elucidates the role of the humanitarian principles in promoting coherence and coordination in the crowded and diverse world of humanitarian action, and discusses whether alternative principles and parallel humanitarian systems are in the making. This volume will be of great interest to postgraduate students and scholars in humanitarian studies, globalization and transnationalism research, organizational sociology, international relations, development studies, and

migration and diaspora studies, as well as policy makers and practitioners engaged in humanitarian action, development cooperation and migration issues.

Believe it or not, the 1990s are history. As historians turn to study this period and beyond, they will encounter a historical record that is radically different from what has ever existed before. Old websites, social media, blogs, photographs, and videos are all part of the massive quantities of digital information that technologists, librarians, archivists, and organizations such as the Internet Archive have been collecting for the past three decades. In *History in the Age of Abundance?* Ian Milligan argues that web-based historical sources and their archives present extraordinary opportunities as well as daunting technical and ethical challenges for historians. Through case studies, he outlines the approaches, methods, tools, and search functions that can help a historian turn web documents into historical sources. He also considers the implications of the size and scale of digital sources, which amount to more information than historians have ever had at their fingertips, and many of which are by and about people who have traditionally been absent from the historical record. Scrutinizing the concept of the web and the mechanics of its archives, Milligan explains how these new media challenge, reshape, and enrich both the historical profession and the historical record. A wake-up call for historians of the twenty-first century, *History in the Age of Abundance?* is an essential introduction to the way web archives work, what possibilities they open up, what risks they entail, and what the shift to digital information means for historians, their professional training and organization, and society as a whole.
