Algebraic geometry seeks to understand these spaces using (commutative) algebra. Definition 1.1. Let S be the ring of polynomial with coefficients in a field k .

Notation. $S = k[x_1, \dots, x_n]$ Definition 1.2. The affine space is $A^n = \{(y_1, \dots, y_n) : y_i \in k\}$. That is k^n without the vector space structure. Definition 1.3. Given polynomial f_1, \dots, f_r

with fun problems in algebraic geometry to pique your interest (dvi, ps, or pdf). Here's a rather detailed summary of the first lecture (dvi, ps, or pdf).

Introduction to Algebraic Geometry

This is the first lecture in MIT's course 18.06, linear algebra, and I'm Gilbert Strang. The text for the course is this book, Introduction to Linear Algebra. And the course web page, which has got a lot of exercises from the past, MatLab codes, the syllabus for the course, is web.mit.edu/18.06. And this is the first lecture, lecture one. So, and later we'll give the web address for viewing these, videotapes.

This graduate textbook offers a self-contained introduction to the concepts and techniques of logarithmic geometry, a key tool for analyzing compactification and degeneration in algebraic geometry and number theory. It features a systematic exposition of the foundations of the field, from the basic results on convex geometry and commutative

Andreas Gathmann - Class Notes: Algebraic Geometry
The aim of these lectures is to introduce some topics in algebraic geometry to students who are familiar with basics of algebraic geometry roughly on the level of a first course on the subject. The students should make themselves familiar with divisors, the canonical divisor, the Riemann-Roch theorem for curves and surfaces, and should be willing to look up more basic results that we need as we ...
