This Special Issue of Fluids is dedicated to the applications of non-equilibrium thermodynamics to multi-phase flows including flows of emulsions, suspensions, foams, and other complex fluids. Experimental and theoretical studies dealing with the applications of classical irreversible thermodynamics (CIT) and extended irreversible thermodynamics (EIT) to flow and rheology of multi-phasic systems are welcome.

Non-Equilibrium Thermodynamics in Multiphase Flows eBook ...

Non-equilibrium thermodynamics is a branch of thermodynamics that deals with physical systems that are not in thermodynamic equilibrium but can be described in terms of variables that represent an extrapolation of the variables used to specify the system in thermodynamic equilibrium. Non-equilibrium thermodynamics is concerned with transport processes and with the rates of chemical reactions. It relies on what may be thought of as more or less nearness to thermodynamic equilibrium. Almost all sy
