## Pantograph Damage Monitoring System

As recognized, adventure as without difficulty as experience approximately lesson, amusement, as well as treaty can be gotten by just checking out a book pantograph damage monitoring system moreover it is not directly done, you could assume even more with reference to this life, on the world.

We come up with the money for you this proper as without difficulty as simple artifice to get those all. We pay for pantograph damage monitoring system and numerous book collections from fictions to scientific research in any way. along with them is this pantograph damage monitoring system that can be your partner.

PANTOBOT 3D is the world's first fully automated three-dimensional wayside pantograph inspection and monitoring system. Deployed by rail operators across Europe, North America, and Asia, PANTOBOT 3D uses advanced imaging and machine learning to assess pantograph condition – safely, in real-time and without the need to withdraw trains from service.

~~PANTOBOT 3D – CAMLIN Group~~

Serco's extensive experience in pantograph testing and overhead line monitoring enabled us to develop an unattended pantograph monitoring system in partnership with Transmissions Dynamics Ltd. This system needed to be capable of being fitted to vehicles operating in passenger carrying service and has been designed to

automatically detect and report the type of faults which lead to pantograph damage and possible de wirement incidents.

## ~~Unattended Pantograph Monitoring Systems~~

The Pantograph Condition Monitoring System (PCMS) is installed above the railway to automatically scan the condition of pantographs as they pass underneath. The process occurs without any contact between the system and the rollingstock itself: as the vehicle passes through the scan location, the system assesses wear on the pantograph head, and scans for any chips or damaged areas.

Overhead Catenary System (OCS) inspection system Pantograph Monitoring System. For line doing mutual direct operation between the different railway companies, it detects any pantograph abnormalities. By the camera installed near the structure (like beam, etc.) near the operating boundary of each railway company, the photograph of pantograph on the crossing train is taken each time automatically.

Product approval based on a successful two year in-service trial at Cheddington on the West Coast Main Line. Network Rail, the UK infrastructure manager, has confirmed that Ricardo Rail's pantograph monitoring system – known as "PanMon" – has been formally approved for use across the national network. Ricardo Rail is now working with Network Rail for a wider roll-out of the system, commencing with four sites on the West Coast Main Line (WCML).

Internal or external factors affect the dynamic behavior of the system and lead to parameter variations. A pantograph in "non-standard conditions" might adversely affects the contact line or that requires a specific maintenance activities. A complete inspection of each of its parts is needed to perform data correlation.
