KPA anchors in riser applications should be used in pairs with one on either side of the riser pipe to balance the load. During installation, normal procedures are that the KPA pipe anchors be connected to the structure prior to making final alignment adjustments in the riser clamp. If using a feature on a

Pipe Riser isolation is used to isolate pipe from the structure and thereby minimize the noise and vibration transmitted into the structure by the vibrations that may be carried along the riser itself, and, to address the issue of relative expansion and contraction between the piping and the structure.

Kinetics Noise Control has the ability to model project specific vertical pipe riser systems using our proprietary computer software which was designed specifically for riser analysis. This is a representative output data sheet for a typical base anchored riser. Results include information concerning the installed and operating spring ...

Providing volume, shape, and pitch controls, the Noise oscillator infuses texture into your transition. Start shaping to add grit, bite, hiss, punch, and more to the effect. The Riser's Chord oscillator introduces you to an uncharted creative continent. Use it to match The Riser's sonic structure to your song's key (or a contrasting one) and blend it to taste; it can be as musical as you want.
