This book constitutes the conference proceedings of the 16th International Symposium on Intelligent Data Analysis, which was held in October 2017 in London, UK. The 28 full papers presented in this book were carefully reviewed and selected from 66 submissions. The traditional focus of the IDA symposium series is on end-to-end intelligent support for data analysis. IDA solicits papers on all aspects of intelligent data analysis, including papers on intelligent support for modelling and analyzing data from complex, dynamical systems.

Developing and Leading Emergence Teams describes a future business landscape that seems to be complicated, complex and chaotic, in almost equal measures. The variety and diversity of the environments within which large organizations will be seeking to operate, require a similar variety of systems, process and structures if they are to respond successfully to emerging opportunities. The established models of teamworking (matrix, cross-functional or transdisciplinary) can all adapt to this new environment but will only do so if the culture, leadership and management style of the business enables this. The authors describe a model of emergence teams; high-trust teams that exhibit exceptional affinity for knowledge sharing, sense making, and consensus building. They then explore the specifics of leading such a team, how the team leader should: design the team; interact and facilitate the team's development; understand the personal nature of each of the team members and the overall emotional regime that will affect trust, commitment and motivation. Peter Smith and Tom Cockburn draw on research and detailed case examples to provide techniques your organization can adopt in order to build and support the various teams capable of addressing complexity.

EU-based technothriller with science-fiction elements. When a wealthy environmentalist resurrects a secret project buried since the close of the Second World War, elite EU special forces team KESTREL are drawn into a dangerous pursuit across Europe and beyond, to prevent a cull of Earth's greatest threat: humanity.

Readers join desperate pilots in the cockpit as they fight gravity and time in a plane that's falling out of the sky. Anyone who watches the news knows about the "black box." Officially called the cockpit voice recorder, the black box (which is actually day-glo orange) records the final moments of any in-flight accident. Often it provides the only explanation of a crash -- inevitably, it provides a heart-breaking, second-by-second account of intense fear tempered by unyielding professionalism. This 1984 Quill title has been completely updated to include twenty-eight new incidents occurring between 1978 and 1996. Some are famous, like the 1996 ValuJet crash in the Everglades and the ill-fated launch of the space shuttle Challenger; other disasters range from commuter prop aircraft to jumbo airliners and a pair of Air Force planes. Few have ever been revealed in their entirety, each, without exception, is absolutely gripping. In this new edition, editor Malcolm MacPherson has, wherever possible, added weather notes and descriptions of events in the cockpit and cabin, heightening our vivid sense of being there during the final moments. Provided by the National Transportation Safety Board and vetted by an experienced airline captain, these are unforgettable case studies in ultimate emergency -- authentic, immediate, filled with drama, terror, human frailty and error, and unquenchable courage.

We need to play with media to become more effective communicators. This book was written to inspire and empower you, as a creative person, to expand your personal senses of digital literacy and digital agency as a multimedia communicator. As you learn to play with digital text, images, audio and video, you will communicate more creatively and flexibly with a wider variety of options. Although written primarily for educators, anyone who is interested in learning more about digital communication will learn something new from this book. As children, we learn to progressively make sense of our confusing world through play. The same dynamics apply to us as adults communicating with new and different media forms.

Now in its 3rd edition, this book emphasizes the physiological perspective of voice disorders & the behavioral & emotional factors that can influence these changes. Coverage includes in-depth explorations of patient-interviewing, history-taking, examination & testing.

Balanced and authoritative, this volume brings together leading experts to present thirteen methodologies widely used in literacy research. Following a consistent format, each chapter describes the methodology at hand, identifies the types of questions and claims for which it is well suited, de-lineates clear standards for quality, and presents one or more exemplary studies using the methodology. Studies are cited in each chapter and can be easily referenced and the chapters follow similar formats, making this an easy text to use. Guiding readers to choose wisely from available methodologies when designing their own research endeavors, and to understand the contributions that each mode of inquiry can generate - this is an essential text for graduate students in literacy. It is also an ideal resource for more experienced researchers seeking to build their skills for utilizing or evaluating particular approaches.

"Just as word learning is incremental, so is learning about vocabulary instruction. Teachers need exposure to research, best-practice strategies, and fellow practitioners." -Charlene Cobb and Camille Blachowicz The way we've learned influences the way we teach, but the vocabulary instruction many of us received- looking up words and writing sentences or completing worksheets- just doesn't work. So what can we do instead? No More "Look Up the List" Vocabulary Instruction is your guide to engaging, research-proven practices for teaching words effectively. Practitioner Charlene Cobb and researcher Camille Blachowicz share why old-fashioned methods don't work, what the research shows does work, and how to put the research into action. Charlene and Camille answer teachers' most commonly asked questions about vocabulary instruction, including: How many words, and how do I select them? How can I foster student independence using dictionaries and glossaries? How do I find time for meaningful vocabulary instruction? How can I assess and hold students accountable? "Without practice in the full range of ways we use a word," write Charlene and Camille, "our word knowledge is limited and falls from our grasp as the next cycle of words enters." No More "Look Up the List" Vocabulary Instruction offers a solution-deepen students' engagement with words, increase their exposure to them, and expand their word knowledge.
