Username: Regenerated (Username, #2) by Joe Sugg

Username: Regenerated was a great sequel to Username: Evie, as the story continues and the characters grow. The story was enjoyable and interesting, and the art was gorgeous. It had a great message of not being quick to judge a book by it's cover and to remain hopeful even when it's hard. Well done Joe! I loved it!

So for Username:Regenerated, we added two assistant artists to the creative team which helped us focus on the details and quality amongst the enormous (but incredibly fun) workload. One big difference this time around is that the script was a little more mature and slightly darker, so we wanted to evolve the characters as well as the art to help reflect this. We worked with Joe and the ...

her nights supporting her terminally-ill father, who is tirelessly working on a computer program. When her father passes away, Evie is forced to live with her aunt, uncle, and cousin-Mallory-who is the most popular girl in school and the bane of Evie's existence. One night, as she's going through her father's computer, Evie stumbles on a strange file that sucks her into a virtual world. As Evie explores this strange, new land, she learns it was the project her father was working so tirelessly on: a virtual Eden where Evie can get away and be herself. However, Evie is not alone; Mallory also discovers the world and her presence causes the idyll to descend into chaos. Now Evie must save the virtual world or lose her last connection to her father.

Node.js is a leading server-side programming environment, MongoDB is the most popular NoSQL database, and AngularJS is quickly becoming the leading framework for MVC-based front-end development. Together they allow web programmers to create high-performance sites and applications built completely in JavaScript, from server to client. Node.js, MongoDB and AngularJS Web Development is a complete guide for web programmers who want to integrate these three technologies into full working solutions. It begins with concise, crystal-clear tutorials on each of the three technologies and then quickly moves on to building several common web applications. Readers will learn how to use Node.js and MongoDB to build

In chemical processes, the progressive deactivation of solid catalysts is a major economic concern and mastering their stability has become as essential as controlling their activity and selectivity. For these reasons, there is a strong motivation to understand the mechanisms leading to any loss in activity and/or selectivity and to find out the efficient preventive measures and regenerative solutions that open the way towards cheaper and cleaner processes. This book

covers the fundamental and applied aspects of solid catalyst deactivation in a comprehensive way and encompasses the state of the art in the field of reactions catalyzed by zeolites. This particular choice is justified by the widespread use of molecular sieves in refining, petrochemicals and organic chemicals synthesis processes, by the large variety in the nature of their active sites (acid, base, acid-base, redox, bifunctional) and especially by their peculiar features, in terms of crystallinity, structural order and textural properties, which make them ideal models for heterogeneous catalysis. The aim of this book is to be a critical review in the field of zeolite deactivation and regeneration by collecting contributions from experts in the field which describe the factors, explain the techniques to study the causes and suggest methods to

prevent (or limit) catalyst deactivation. At the same time, a selection of commercial processes and exemplar cases provides the reader with theoretical insights and practical hints on the deactivation mechanisms and draws attention to the key role played by the loss of activity on process design and industrial practice./a

She can never go to school, make friends, or get the eye implants that will mark her as a true member of Eden. Outside of Eden, Earth is poisoned and dead. All animals and most plants have been destroyed by a man-made catastrophe. Long ago, the brilliant scientist Aaron Al-Baz saved a pocket of civilization by designing the EcoPanopticon, a massive computer program that hijacked all global technology and put it to use preserving the last vestiges of mankind. Humans will wait for thousands of years in Eden until the EcoPan heals the world. As an illegal

“Calls to mind such early moderns as Hemingway and Fitzgerald...Some of the most powerful antiwar literature in modern English fiction.”—The Boston Globe The first book of the Regeneration Trilogy—a Booker Prize nominee and one of Entertainment Weekly’s 100 All-Time Greatest Novels. In 1917 Siegfried Sasson, noted poet and decorated war hero, publicly refused to continue serving as a British officer in World War I. His reason: the war was a senseless slaughter. He was officially classified "mentally unsound" and sent to Craiglockhart War Hospital. There a brilliant psychiatrist, Dr. William Rivers, set about restoring Sassoon’s “sanity” and sending him back to the trenches. This novel tells what

happened as only a novel can. It is a war saga in which not a shot is fired. It is a story of a battle for a man's mind in which only the reader can decide who is the victor, who the vanquished, and who the victim. One of the most amazing feats of fiction of our time, *Regeneration* has been hailed by critics across the globe. More than one hundred years since World War I, this book is as timely and relevant as ever.
